

**Tortilla Oven Manufacturer****CUSTOMER:**

A leading provider of automated equipment and services to the tortilla manufacturing industry

APPLICATION:

Tortilla Ovens and Tortilla Cooling Conveyors

**PROBLEM:**

The provider offers the industry's most extended warranty period on all its bakery machines. Roller bearings were failing long before the warranty period was achieved. They would need to dispatch a service technician to replace these bearings, which was very costly.

GRAPHALLOY SOLUTION:

The provider designed their next generation of Tortilla Ovens and Cooling Tower shafts to accept Graphalloy 212 bushings.

RESULTS:

Some of the provider's largest customers have written testimonials about the reliability of their tortilla ovens and the extended life they receive from the Graphalloy bushings. Additional applications for Graphalloy on the provider's equipment are being explored.
